..only makes square ends
..is incapable of making white baguettes with a dense crumb
..yes, but the Divitrad does the same
..yes, but the Manotrad does the same

Paneotrad® is.. "TOO EXPENSIVE"

- **Replaces 3 machines**: divider / chest-type intermediate proofer / moulder

- **Paneotrad® refrigeration budget** (in cold room only) **< traditional manufacturing refrigeration budget** (proofing cabinet)

- Work in 400*600 format rather than 600*800:
  -**Lower accessories budget** (no more linen canvas)
  -**Space savings**: installation of a Paneotrad® bakehouse in much smaller areas = lower rent

- **Working with up to 80% hydrated doughs**: improved margins compared to a conventional process

- **Dough conservation up to 72 h**: daytime production, no more need for night work

Paneotrad® is THE cheapest and most profitable artisanal solution!

..only makes square ends
..is incapable of making white baguettes with a dense crumb
..yes, but the Divitrad does the same
..yes, but the Manotrad does the same

Paneotrad® is.. "TOO SLOW"

- **The fastest machine in the world**: works in hidden time
- **30% labour saved with a Paneotrad®** compared to a traditional process
- **A unique dough for a diversified offer**: dough preparation time savings. Moreover, the dough can be prepared every 72 hours only, without deterioration of the dough.
- **Diverse creations**, without changing the grid, simply by turning a button!

Thanks to its ease of production, along with the diversity and flexibility offered, Paneotrad® saves time at the total production scale!

..yes, but the Divitrad does the same
..yes, but the Manotrad does the same

Paneotrad® is.. "TOO SLOW"

- **Paneotrad® works faster than the oven**:

- The bakery's productivity is determined by oven production capacity, not by Paneotrad®.

- To ensure a capacity of 350 baguettes/hour with one baker, an oven of at least 12 m² would be required.
- For a capacity of 500 baguettes/hour, with two bakers, an oven of at least 16m² would be required.

* These calculations were based on a 20 min baking time

For example, the best-selling oven (Orion EvO 801/4/180) is filled in 15 minutes. The baker then needs to wait for baking to end.

Paneotrad® ...

..yes, but requires qualified staff
..yes, but in the event of a breakdown my production is blocked
..yes, but my miller is opposed to it
..yes, but it's not distinctive
..takes up space
..only makes square ends
..is incapable of making white baguettes with a dense crumb
..yes, but the Divitrad does the same
..yes, but the Manotrad does the same

Paneotrad® .. "USES TOO MUCH FLOUR"

- The Paneodust flour duster allows a **reduction in the quantity of flour used** and ensures **uniform flouring**
- On average, a baker wastes 3 to 5 kg of flour/day, i.e. € 3,000/year. This is the price of Paneodust, so it **pays for itself in just 1 year**.
- **Flour emissions are reduced**: reduction of occupational lung diseases.

Paneotrad® ...

..is too expensive
..is too slow
..uses too much flour
..looks like industrial bread
..yes, but requires qualified staff
..yes, but in the event of a breakdown my production is blocked

..yes, but it's not distinctive
..takes up space
..only makes square ends
..is incapable of making white baguettes with a dense crumb
..yes, but the Divitrad does the same
..yes, but the Manotrad does the same

Paneotrad®.. "LOOKS LIKE INDUSTRIAL BREAD"

- **The baker chooses the appearance of his bread when loading the oven**: length, width, rounded ends, pointed ends, epi or crown.
- **The rounded end moulding die allows you to directly bake rounded end baguettes**, without having to manually work their shape.

Paneotrad® ...

..yes, but it's not distinctive
..takes up space
..only makes square ends
..is incapable of making white baguettes with a dense crumb
..yes, but the Divitrad does the same
..yes, but the Manotrad does the same

Paneotrad®.. "YES, BUT REQUIRES QUALIFIED STAFF"

- As in all manufacturing, the professional is at the kneader. Whatever the manufacturing process is, if the baker or the dough is not good, the bread will not be high-quality.
- **3 days of training are provided to the bakers** to support them and adapt their recipes. The baker is the only one who needs to know the process of making the dough.
- **The other staff do not need to be qualified.** They will simply require training in the Paneotrad® process, in dough folding and oven-loading.
- **The salespersons are perfectly capable of baking alone, without the baker being present.** Effortless and fun, the Paneotrad® is easy to use.

BONGARD

Paneotrad® ...

..yes, but my miller is opposed to it
..yes, but it's not distinctive
..takes up space
..only makes square ends
..is incapable of making white baguettes with a dense crumb
..yes, but the Divitrad does the same
..yes, but the Manotrad does the same

Paneotrad®.. "IN THE EVENT OF A BREAKDOWN THE PRODUCTION IS BLOCKED"

- No more so than with a hydraulic divider. If this should happen**, we are able to respond in less than 3 hours. 1 maintenance visit is enough to guarantee its reliability.**

- **Paneo is a very reliable machine** with mechanical elements that are not subjected to great stresses. This is why the dough is not damaged and keeps its beautiful cells.

- **A single machine to maintain, not three as with a traditional process.** No conveyor belt or chain sprockets to replace.

Paneo significantly reduces your equipment maintenance budget compared to the equipment necessary for traditional manufacturing!

Paneotrad® ...

..is too expensive
..is too slow
..uses too much flour
..looks like industrial bread
..yes, but requires qualified staff
..yes, but in the event of a breakdown my production is blocked
..yes, but my miller is opposed to it
..yes, but it's not distinctive
..takes up space
..only makes square ends
..is incapable of making white baguettes with a dense crumb
..yes, but the Divitrad does the same
..yes, but the Manotrad does the same

Paneotrad®.. "YES, BUT MY MILLER IS OPPOSED TO IT"

- Millers are sometimes opposed to Paneotrad®, **though this is much less true now.**

- With Paneotrad®, the dough is more hydrated, so they are afraid of selling less flour. On the contrary, **Paneotrad® supports bakers in their diversification** and development. **The miller benefits and sells more flours** and special flours.

- **It becomes so easy to diversify that sales increase among those of our customers who have taken the plunge.**

Paneotrad® ...

..is too expensive
..is too slow
..uses too much flour
..looks like industrial bread
..yes, but requires qualified staff
..yes, but in the event of a breakdown my production is blocked
..yes, but my miller is opposed to it
..yes, but it's not distinctive
..takes up space
..only makes square ends
..is incapable of making white baguettes with a dense crumb
..yes, but the Divitrad does the same
..yes, but the Manotrad does the same

Paneotrad®.. "YES, BUT IT'S NOT DISTINCTIVE"

- It's like in traditional manufacturing, everyone has a divider and a moulder, so everyone has the same baguette initially.
- Conversely, **Paneotrad® offers a broad choice of products**: a multitude of shapes can be produced from the same dough.
- **The baker selects the appearance of his/her bread when loading the oven.** And above all, the bread is defined by what goes into the recipe.
- **There are 36 available moulding dies**, not counting double cuts.

Paneotrad® ...

..is too expensive
..is too slow
..uses too much flour
..looks like industrial bread
..yes, but requires qualified staff
..yes, but in the event of a breakdown my production is blocked
..yes, but my miller is opposed to it
..yes, but it's not distinctive
..takes up space
..only makes square ends
..is incapable of making white baguettes with a dense crumb
..yes, but the Divitrad does the same
..yes, but the Manotrad does the same

Paneotrad®.. "TAKES UP SPACE"

- **Paneotrad® takes up less space than the three machines it replaces.**
- Moreover, it is **mounted on castors to ensure easy movement.**
- The smallest bakery equipped with a Paneotrad® bakehouse is **less than 20 m².**

Paneotrad® ...

..is too expensive
..is too slow
..uses too much flour
..looks like industrial bread
..yes, but requires qualified staff
..yes, but in the event of a breakdown my production is blocked
..yes, but my miller is opposed to it
..yes, but it's not distinctive
..takes up space
..only makes square ends
..is incapable of making white baguettes with a dense crumb
..yes, but the Divitrad does the same
..yes, but the Manotrad does the same

Paneotrad®.. "MAKES ONLY SQUARE ENDS"

- Not true, **a rounded-end moulding die is also available.**
- **When loading the oven, the baker chooses the appearance of the bread:** length, width and shape

Paneotrad® ...

..is too expensive
..is too slow
..uses too much flour
..looks like industrial bread
..yes, but requires qualified staff
..yes, but in the event of a breakdown my production is blocked
..yes, but my miller is opposed to it
..yes, but it's not distinctive
..takes up space
..only makes square ends
..is incapable of making white baguettes with dense crumb
..yes, but the Divitrad does the same
..yes, but the Manotrad does the same

Paneotrad®.. "IS INCAPABLE OF MAKING WHITE BAGUETTES WITH DENSE CRUMB"

- It's possible! **With kneading and a process adapted** to the production of dense-crumb white baguettes
- Our demonstrator can show you how!

Paneotrad® ...

..is too expensive
..is too slow
..uses too much flour
..looks like industrial bread
..yes, but requires qualified staff
..yes, but in the event of a breakdown my production is blocked
..yes, but my miller is opposed to it
..yes, but it's not distinctive
..takes up space
..only makes square ends
..is incapable of making white baguettes with a dense crumb
..yes, but the Divitrad does the same
..yes, but the Manotrad does the same

Paneotrad®.. "yes, but the Divitrad does the same"

- **Contrary to Paneotrad®, the Divitrad**:

- Doesn't work in hidden time
- Requires the grids to be replaced when changing shape
- Doesn't seal the edge of the dough after cutting
- Requires allowing the dough to resume its shape before loading it into the oven
- Not as easy to clean and shows flour retention areas inside the equipment

It is a completely different process from the Paneotrad® process. Hydraulic dividers are suitable for bakeries that produce less than 300 baguettes/day.

Paneotrad® …

..is too expensive
..is too slow
..uses too much flour
..looks like industrial bread
..yes, but requires qualified staff
..yes, but in the event of a breakdown my production is blocked
..yes, but my miller is opposed to it
..yes, but it's not distinctive
..takes up space
..only makes square ends
..is incapable of making white baguettes with a dense crumb
..yes, but the Divitrad does the same
..yes, but the Manotrad does the same

Paneotrad®.. "..yes, but the Manotrad does the same"

- The Manotrad is not suitable for large-scale production.
- It may be suitable for a production of 50 baguettes per day
- But watch out for **R**epetitive **S**train **I**njuries!
